

System Validations for the 2014 MLR Reporting Year

When an issuer uploads the annual MLR reporting form or Risk Corridors Plan-level Data forms into the Health Insurance Oversight System (HIOS), the submission undergoes several automated validations. Some of the validations result in an error message and the issuer must resolve the problem before they can attest to their submission. Other validations result in warning messages to indicate a potential problem with their submission but do not prevent the company from attesting to their submission.

The user who uploaded the submission receives the error messages and the warning messages. The company CEO and CFO only receive the warning messages. The warning messages sent to the CEO and CFO includes a notification that they may attest to the company submission if the warning messages are unfounded.

In addition to receiving validation messages by email, company users may view the full list of validation messages using the “Warnings and Comparison Report” on the “View Uploaded Data” page or the “Attestation” page in HIOS. Each validation message indicates the name of the template that triggered the validation, as well as the relevant row and column within the template. Some of the validations apply to the entire submission, including all state workbooks and the Grand Total (GT) workbook. Others apply only to state workbook or only to the GT workbook. Validations that apply to the Risk Corridors Plan-level Data Form are indicated as “RC”.
