

Effectuated Enrollment for the First Half of 2020

This report provides average monthly effectuated enrollment and premium data for the individual market Federal and State-Based Exchanges for the first six months of the 2020 plan year.¹ The Centers for Medicare & Medicaid Services (CMS) publishes effectuated enrollment data semiannually to provide a more accurate picture of enrollment trends for the Exchanges than indicated by the number of individuals who selected a plan during Open Enrollment. For coverage to be considered effectuated, individuals generally must pay the first month's premium for the plan.

As of September 15, 2020, an average of 10.5 million individuals had effectuated their coverage through June 2020. Average effectuated enrollment in the first six months of 2020 was approximately 349,000, or three percent, higher compared to the same time period in 2019.²

Similar to past years, the number of individuals who effectuated coverage is lower than the number with plan selections at the end of Open Enrollment. The average number of individuals with effectuated coverage for the first half of 2020 was about 866,000 lower than the number of individuals with plan selections at the end of the 2020 Open Enrollment Period (OEP). This reflects a higher rate of enrollment effectuations from plan selections than last year. That is, effectuated enrollments for the first half of 2020 were 92% of OEP plan selections, up from 89% over the same period in 2019. This higher rate of enrollment is largely due to lower attrition and higher enrollment of consumers through Special Enrollment Periods (SEPs).³

The data released today also show that the average monthly premium per enrollee in the first six months of 2020 was \$574.95, a decrease of three percent compared to the first six months of 2019. The average monthly amount of advance payments of the premium tax credits (APTC) per eligible enrollee decreased four percent to \$491.30, when compared with the first six months of 2019 average APTC per eligible enrollee. The average premium and average APTC amounts have been relatively stable since the start of the 2020 plan year, as indicated in the Early 2020 Effectuated Enrollment Snapshot.⁴ The proportion of total enrollees who received APTC in the first six months of 2020 slightly decreased to 86.4 percent, from 87.0 percent in the first half of 2019.

Background Information

The source for the first half of 2020 average effectuated enrollment is payment and enrollment data. Effectuated enrollment is the average number of individuals who had an active policy at any point from January through June of 2020, and who paid their premium (thus effectuating their coverage) as of

¹ The effectuated enrollment data for 2016-2020 respectively are posted here:

September 15, 2020. This report includes effectuated enrollment for both State-Based Exchanges and States using the HealthCare.gov platform.

APTC enrollment is the total number of individuals who had an active policy at any point from January through June 2020, who paid their premium, if applicable, and received APTC. APTC is generally available if an individual's estimated household income is between 100 and 400 percent of the federal poverty level, and certain other criteria are met. An individual was defined as receiving APTC if the applied APTC amount was greater than \$0; otherwise, an individual was classified as not receiving APTC.

CSR enrollment is the total number of individuals who had an active policy at any point from January through June 2020, who paid their premium, if applicable, and received cost-sharing reductions (CSR).⁵ A consumer is generally eligible for CSR if the individual is eligible for APTC, has an estimated household income between 100 percent and 250 percent of the federal poverty level, and is enrolled in a health plan from the silver plan category. American Indians and Alaskan Natives are eligible for CSRs under different criteria.
